DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- 1. Pulmonary surfactant,
- 2. PDE2 inhibitor, and
- 3. Disease to be treated.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 6-7 disclose the pulmonary surfactants.

Claims 8-9 disclose the PDE2 inhibitors.

Application/Control Number: 10/568,817

Art Unit: 1609

Claims 10-11 disclose the diseases where PDE2 activity is detrimental.

The following claim(s) are generic: claims 3-6, 8-16, 18-19 and 21.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

As applicants point out, there are a number of known pulmonary surfactants (specification page 6 paragraph 2). So if the special technical feature is a composition belonging to the class "pulmonary surfactants", then the fact that some do not have activity means some are not effective in the claimed invention, and the special technical feature must be tied to the reactivity of the surfactants.

The PDE2 inhibitors vary in structure and reaction methods, from acetamides to carboxylic acids. With no common core structure or method of inhibiting PDE2, the compounds do not have a common special technical feature.

Finally, the diseases where PDE2 activity is detrimental vary from ARDS to asthma. While PDE2 is directly related to some conditions (see Specification page 2, first full paragraph), the relation to asthma is not directly related and may not apply to all asthma patients' conditions (see Specification page 2, second full paragraph).

Therefore, the diseases do not share a special technical feature when asthma may not be affected by the treatment as claimed in the instant application.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Application/Control Number: 10/568,817

Art Unit: 1609

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin J. Packard whose telephone number is 571-270-3440. The examiner can normally be reached on M-R 9-4:30 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin H. Marschel can be reached on 571-272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
